Warm, welcoming and energy efficient – fires for Kiwi conditions by Warmington Industries

A reinvented interior is the sum of all its parts – but one element to always catch the eye, warm the heart and provide a focus for conversation is the flickering fireplace.

Warmington fires are all designed and built to offer that feel-good factor, says marketing co-ordinator Deborah Grey.

“Our company’s broad range of open fires, gas and wood burners, and outdoor fireplaces makes it easy to choose a model to suit your home and lifestyle.

“Warmington’s open wood fires utilise Caitec technology, for optimum efficiency and heat output. They are easily installed into new homes or existing fireplaces, making them ideal for home renovators.”

The gas fire range from Warmington uses a built-in downdraft diverter, both for safety and to maintain constant fresh air. Burners are available in LPG or natural gas and these fires are also easy to install.

The Warmington Nouveau outdoor range enhances any outdoor area – offered in wood and gas, these fires reclaim your outdoor spaces year round.

Built for Kiwi homeowners by a New Zealand company, Warmington fires meet all national build ratings, and emission codes. Warmington Industries operates a dealer network throughout New Zealand, including Fires by Design in Auckland.

Visit the Warmington showroom, 47 Sir William Ave, East Tamaki, phone (09) 273 9227. Email: sales@warmington.co.nz. Website: www.warmington.co.nz.
